your 7pm just cleared. want to do something tonight?
sure but nothing too much, kinda tired
perfect kind of night for this then
Smalls Jazz Club – Late Night Set

About

Karpo is a proactive AI assistant that lives in iMessage and helps you decide what to do next. It turns a quick text into tailored suggestions, tracks tickets, and can assist with travel and life admin, with a clear focus on city life in places like New York City, San Francisco, and London.

What is Karpo

Karpo is a proactive AI assistant built around text messaging, with an experience centered on iMessage. It is designed to help people turn a loose plan into an actual next step, whether that means finding a place to go, checking what is happening tonight, or handling small tasks that get in the way of making plans. The app presents itself as a

city-aware companion that knows your preferences over time and responds in a conversational way.

Karpo is especially positioned for urban outings and local discovery. The site highlights support for New York City, San Francisco, and London, and it shows examples around music venues, neighborhoods, restaurants, and late-night plans. In practice, that makes Karpo less like a static directory and more like an AI assistant that tries to act on the moment.

Key features

Karpo combines recommendation, monitoring, and planning features in one AI assistant flow.

- Personalized suggestions for where to go and what to do for fun.
- City guides and curated exploration content.
- Ticket tracking that can watch for price drops or sell-out risk.
- Help with travel booking and other life admin tasks.
- A messaging-first experience that is shown in iMessage-style conversations.
- Local knowledge with an emphasis on major cities such as New York City, San Francisco, and London.

The product examples suggest that Karpo can react to context, such as a free evening or low-energy plan, and return a specific idea instead of a generic list. That makes the AI assistant feel more like a planning partner than a search box.

How to use it

Using Karpo appears straightforward because the app is built around texting rather than forms.

- Open the app and start a conversation with Karpo.
- Send a natural-language request like what to do tonight, where to go, or what kind of plan you want.
- Review the suggested options, which may include venues, routes, or activity ideas.

For the best results, be specific about city, budget, energy level, timing, and the kind of vibe you want. The examples on the site show that Karpo works best when the request sounds like a real message you would send a friend.

Who it is for

Karpo is a good fit for people who want an AI assistant that helps them act on plans instead of just brainstorm them. It is especially relevant for:

- City dwellers who want faster decisions about where to eat, go out, or spend an evening.
- People in New York City, San Francisco, or London who want local guidance.
- Users who want help tracking tickets instead of checking repeatedly themselves.
- Travelers or busy people who want some help with booking and life admin.
- Anyone who prefers a text-based assistant over a traditional dashboard.

The app also suits people who like discovery content and curated city recommendations. Karpo's examples show music, nightlife, and neighborhood picks, so it looks strongest for outings rather than broad enterprise tasks.

What to know before you use it

Karpo is not a universal answer engine, and it should not replace official sources for time-sensitive details. If you need exact event rules, venue policies, transportation changes, or final ticket terms, confirm with the organizer, venue, or ticket seller before you act.

The site gives clear examples of city recommendations and ticket monitoring, but it does not spell out every workflow, every supported platform, or every integration. That means some capabilities are best treated as demonstrated use cases rather than guaranteed everywhere. The app's strongest claims are around a proactive AI assistant, iMessage-style texting, local suggestions, and ticket watching, so avoid assuming it handles every type of booking or admin task equally well.

Karpo also appears to be most developed for a few major cities, so coverage may be thinner outside those markets. If you are elsewhere, the AI assistant may still help, but

Karpo works best when you treat it as an AI assistant for making real-world choices quickly, not as a substitute for official confirmation. If you want a proactive AI assistant that lives in iMessage and helps you move from “maybe” to “done,” Karpo is built for that kind of city planning.

FAQ

- How does Karpo work?
- What does Karpo do?
- What cities does Karpo support?
